

CSS Lists

Topics : [CSS](#)

Written on [March 22, 2021](#)

There are two types of lists in HTML.

1. Unordered lists () : Unordered lists are marked with bullets.
2. Ordered lists () : are marked with numbers or alphabet.

CSS Lists properties are used to style HTML lists Element. CSS Lists properties can be used to control lists as below.

- **list-style:** It is a shorthand property. It can be used to set all the list properties in one declaration.
- **list-style-image:** Specify an image for the marker instead of using the number or bullet point.
- **list-style-position:** Set the position of the list-item markers (bullet points). Specify the marker outside or inside the box that contains the list items.
- **list-style-type:** Set shape or appearance of the marker.

Syntax :

```
list-style:circle;  
list-style-image:none;  
list-style-position:inside;  
list-style-type:decimal;
```

CSS Lists Example :

```
<html>  
<head>  
  <title>Learn Css Lists tutorials by aryatechno</title>  
  <style>  
    ul li{  
      list-style-type:circle;  
      list-style-position:outside;  
    }  
  </style>  
</head>  
<body>  
  <ul>  
    <li>PHP</li>  
    <li>CSS</li>  
    <li>MYSQL</li>  
    <li>JAVa</li>
```

```
</ul>
</body>
</html>
```

Output :

- PHP
- CSS
- MYSQL
- JAVa
