CSS Outlines

Topics : CSS
Written on March 31, 2021

CSS Outlines property is used to apply color, style and width on extra border around an element.

There are four type of Outline property as below.

1. **outline :** It is used to set all the below three properties in a single statement.
2. **outline-color :** It is used to set the color of the outline.
3. **outline-style :** It is used to set the line style of the outline. The value of outline-style are dashed, dotted, double, groove, hidden, inset, none, outset, ridge, solid.
4. **outline-width :** It is used to set the width of the outline. There are three value like thin, medium, or thick.

Syntax :

```
outline:dashed #333333 medium;
outline-color:#333333;
outline-style:double;
outline-width:thick;
```

Example :

```
<html>
<head>
   <title>Learn Css outline tutorials by aryatechno</title>
</head>
<body>
 <p style="outline:dashed #FF0000 medium;">outline property with color, width and style.</p>
 <p style="outline-color:#333333; outline:groove;">outline-color property with color.</p>
 <p style="outline-style:double;">outline-style property is used to set double border.</p>
 <p style="outline-width:thick;outline:dotted">outline-width property is used to set thick outline
border.</p>
</body>
</html>
```
