PHP lcfirst() Function

Topics : PHP Functions
Written on April 21, 2021

PHP lcfirst() Function converts only the first character of a string into lowercase. The lcfirst() Function is php in-built function.

Syntax :

lcfirst*(string);*

Parameters ,

string *:* Required. It is required to make only the first characters of string to lowercase.

It returns the lowercased first characters of whole string.

Similar function of lcfirst() :

ucwords(): It makes the first character of each word to uppercase in string..
strtolower() : It converts a whole string into lowercase.
ucfirst() : It converts only the first character of a string into uppercase.
strtoupper() : It converts a whole string into uppercase.
