

PHP array_pop() Function

Topics : [PHP Functions](#)

Written on [April 23, 2021](#)

PHP array_pop() Function is used to remove the last element of an array. The array_pop() is a built-in function of PHP.

Syntax :

`array_pop(array)`

Parameter,

\$array : Required It is type of array parameter.

Return : It returns array with removed last element. If **array** is empty, or is not an array, **NULL** will be returned.

Let's see below example to understand php array_pop() Function in details.

Example :

```
<?php
echo "<br><br>Deleting last one element from an array.<br>";
$tutorials= array("PHP", "HTML", "JAVASCRIPT", "JAVA", "CSS");
array_pop($tutorials);
print_r($tutorials);
?>
```
