How to run Node.js program?

node command is used to run Node.js program.

Below command is used to execute file.

`D:\nodejs\website> node server.js`

It runs server.js file.

`D:\nodejs\website> nodemon`

This command runs application. If you use nodemon command for your application, then you don't need to run application everytime after changing code.

Example (file server.js):

```
const express = require('express');

const app = express();

const port =6666;

app.listen(port, () => {

    console.log(`Server running on port: ${port}`);

});
```

//Output : Server running on port: 6666
