How to install Java?

Download java for free at [oracle.com](https://www.oracle.com) to install java on your computer.

Install the JDK if you don't have installed it, [download the JDK](#) and install it.

Set path of the jdk/bin directory as below

- Set temporary path of JDK = > 1. Open the command prompt 2. Copy the path of the JDK/bin directory 3. Write in command prompt: set path=jdk_bin_path i.e **C:\Program Files\Java\jdk-11.0.1\bin**
- Set permanent path of JDK => Go to MyComputer properties -> advanced tab -> environment variables -> new tab of user variable -> write path in variable name -> write path of bin folder in variable value -> ok -> ok -> ok

Check java version in command prompt using command **java -version** to check if Java is running on your machine

Create the Java program

Compile the Java program using command javac Main.java

Run the Java program using command java Main
