

PHP code for Array

Topics : [PHP Programs](#)

Written on [December 13, 2022](#)

php code for Numeric array, Associative array and Multi dimetional Array as below

Example :

```
<?
echo "<br/> Numeric array</br>";

$arr=array(1=>"India",2=>"China",3=>"canada");

echo "<br/> Country: ".$arr[2];
$arr[4]="Sri Lanka";
echo "<br/> after push</br>";
array_push($arr,"USA");
print_r($arr);
echo "<br/> After pop</br>";
array_pop($arr);
print_r($arr);
$arr1=array("gujarat","maharastra","MP");
echo "<br/> Array</br>";
print_r($arr1);

echo "<br/> Associative array</br>";

$strarr=array("Domestricanimal"=>"dog","bird"=>"crow","wildanimal"=>"tiger");

echo "<br/>".$strarr['wildanimal'];

echo "<br/>Multi dimetional Array</br>";

$multiarr=array("animal"=>array("Domestricanimal"=>"dog","wildanimal"=>"tiger"),"birds"=
>"parrot");

print_r($multiarr);

echo "<br>".$multiarr['animal']['wildanimal'];
```

```

$arrvar=array(11,22,33,44,55,66);

$arrvar[2]=99;
array_push($arrvar,77,88);
foreach($arrvar as $key=>$val)
{
echo "<br>".$key ." : ".$val;

}

for($i=0;$i<count($arrvar);$i++)
{
echo "<br/> $i : ".$arrvar[$i];

}
$arr=array(1=>"India",2=>"China",3=>"canada");
$slice=array_slice($arr,1,1);

print_r($slice);
?>

```

Output :

Numeric array
 Country: China
 after pushArray ([1] => India [2] => China [3] => canada [4] => Sri Lanka [5] => USA)
 After popArray ([1] => India [2] => China [3] => canada [4] => Sri Lanka)
 ArrayArray ([0] => gujarat [1] => maharastra [2] => MP)
 Associative array
 tiger
 Multi dimetional ArrayArray ([animal] => Array ([Domestricanimal] => dog [wildanimal] => tiger)
 [birds] => parrot)
 tiger
