PHP code for cookies

Topics : PHP Programs
Written on December 13, 2022

PHP code for cookies - cookie can be defined by php variable $_COOKIE

Example :

```
<?php
if(isset($_COOKIE['nameofcookie'])){
echo '<br>User ' . $_COOKIE['nameofcookie'] . ' is set<br>';
}else{
echo '<br>User is not set<br>';
}

?>
======================
Version 2 for cookies
======================
<?php
//to change cookie
setcookie('nameofcookie','Frank', time() + (86400 *30));//set for a day

if(isset($_COOKIE['nameofcookie'])){
echo '<br>User ' . $_COOKIE['nameofcookie'] . ' is set<br>';
}else{
echo '<br>User is not set<br>';
}
?>
========================
Version 3 for cookies
========================

<?php
//to change cookie
setcookie('nameofcookie','Frank', time() + (86400 *30));//set for a day
//to unset a cookie just set the time that is already past
//delete cookie
setcookie('nameofcookie','Frank', time() -3600);

if(isset($_COOKIE['nameofcookie'])){
```

```
echo '<br>User ' . $_COOKIE['nameofcookie'] . ' is set<br>';
}else{
echo '<br>User is not set<br>';
}
?>
==========================
Version 4 check for cookies
==========================
<?php
//to change cookie
setcookie('nameofcookie','Frank', time() + (86400 *30));//set for a day

if(count($_COOKIE) > 0){
echo '<br>There are ' . count($_COOKIE) . ' cookies saved<br>';
}else{
echo '<br>There are no cookies saved<br>';
}

if(isset($_COOKIE['nameofcookie'])){
echo '<br>User ' . $_COOKIE['nameofcookie'] . ' is set<br>';
}else{
echo '<br>User is not set<br>';
}
?>
```

Output :

User is not set
========== Version 2 for cookies ==========
User is not set
========== Version 3 for cookies ==========
User is not set
========== Version 4 check for cookies
==========
There are no cookies saved

User is not set
