

# PHP Sending HTML email

Topics : [PHP](#)

Written on [February 05, 2021](#)

PHP mail() function is used to send HTML email. HTML email message contains HTML tags like image, table, link, banners etc.

## PHP Syntax :

```
mail($to,$subject,$message,$headers);
```

\$headers Parameters will be needed to send HTML message to receivers.

\$headers contains details like From, Cc, Bcc, MIME-Version, Content-type etc. Content-type should be text/html.

## PHP Example :

```
<html>

<head>
<title>Sending HTML email using PHP</title>
</head>

<body>

<?php
    $to = "info@example.com";
    $subject = "Learn JAVA by aryatechno.";

    $message ="<html> <head> <title>Learn Core Java.</title></head><body>";
    $message .= "<b>This is HTML message.</b>";
    $message .= "<h1>Core Java.</h1>";
    $message .= "<p>java is object oriented language.</p>";

    $message ="</body></html>";

    $header = "From:my@demowebdomain.com \r\n";
    $header .= "Cc:test@demowebdomain.com \r\n";
    $header .= "MIME-Version: 1.0\r\n";
    $header .= "Content-type: text/html\r\n";

    $status = mail ($to,$subject,$message,$header);
```

```
if($status == true) {  
    echo "HTML Message is sent successfully..";  
}else {  
    echo "HTML Message is not sent successfully..";  
}  
?>  
  
</body>  
</html>
```

**Output:**

HTML Message is sent successfully..

**Output :**
