

Learn PHP Syntax

Topics : [PHP](#)

Written on [December 31, 2020](#)

The PHP syntax and semantics are the format and the related meanings of the text and symbols in the PHP programming language.

They form a set of rules that define how a PHP program can be written and interpreted. A PHP script can be placed anywhere in the HTML document. A PHP script starts with `<?php` and ends with `?>`. Also you can use short tag `<? echo "Good morning" ?>`

The default file extension for PHP files is ".php". PHP code can be embedded in HTML code. PHP statements end with a semicolon (;) keywords (e.g. if, else, while, echo, etc.), classes, functions, and user-defined functions are not case-sensitive in php. All variable names are case-sensitive
