

Laravel Artisan commands for cache

Topics : [Laravel](#)

Written on [March 07, 2024](#)

1. **Application Cache:** This includes route cache, configuration cache, and other cached data.

```
php artisan cache:clear
```

2. **Route Cache:** If you have cached your routes for performance, you can clear them using:

```
php artisan route:clear
```

3. **Configuration Cache:** If you've cached your configuration for performance, you can clear it using:

```
php artisan config:clear
```

4. **View Cache:** If you are using Laravel's view caching feature, you can clear it using:

```
php artisan view:clear
```

5. **Compiled Class Files:** Laravel compiles classes for performance. You can clear compiled classes using:

```
php artisan clear-compiled
```

6. **Optimize Autoloader:** To optimize the autoloader for better performance, you can use:

```
composer dump-autoload
```

7. **Install Intervention Image Package:** Make sure that the intervention/image package is installed in your Laravel project. You can install it via Composer by running the following command in your terminal:

composer require intervention/image
